Image Augmentation

```
from tensorflow.keras.preprocessing.image import ImageDataGenerator
```

```
F_dgen=ImageDataGenerator(rescale=1./255,  
                           zoom_range=0.2,  
                           horizontal_flip=True)
```

```
Flowers= F_dgen.flow_from_directory('/content/flowers',  
                                     target_size=(64,64),  
                                     class_mode='categorical',  
                                     batch_size=100)
```

Found 4317 images belonging to 5 classes.

Create a CNN model and add layers

```
from tensorflow.keras.models import Sequential  
from tensorflow.keras.layers import Convolution2D, MaxPooling2D, Flatten, Dense
```

```
#Initializing the model
model = Sequential()

#convolution layer
model.add(Convolution2D(32,(3,3),activation='relu',input_shape=(64,64,3)))

#MaxPooling layer
model.add(MaxPooling2D(pool_size=(2, 2)))

#Flatten layer
model.add(Flatten())

#Hidden layers
model.add(Dense(350,activation='relu'))
model.add(Dense(150,activation='relu'))

#output layer
model.add(Dense(5,activation='softmax'))
```

Compile the model

```
model.compile(optimizer='adam',loss='categorical_crossentropy',metrics=['accuracy'])
```

Fit the model

```
model.fit_generator(Flowers,
                    steps_per_epoch=len(Flowers),
                    epochs=20,
                    validation_data=Flowers,
                    validation_steps=len(Flowers))
```

```
/usr/local/lib/python3.7/dist-packages/ipykernel_launcher.py:5: UserWarning: `Model.fit_generator` is deprecated and will be removed in a future version.
